Promotion Opportunities

Approved By:

Daniel K. Berman

Prepared By:

Adam Branson

Report Highlights:

The National Institute of Statistics and Geography (INEGI) reported that Mexico imported U.S. \$29.8 billion and exported U.S. \$21.8 billion in agricultural, fishery, and forestry commodities in 2012. The United States at U.S. \$20.9 and \$16.5 billion represented 70 and 75 percent, respectively of Mexico's import or export market share. From and to all sources, Mexico's principal ag-related imports consisted of grains and oilseeds whereas beer and horticultural products were chief exports.

General Information:

This report looks at general trade flows for Mexico in calendar year 2012. INEGI recently released calendar year 2012 trade data which revealed that Mexico's balance of trade for all goods with the world in Harmonized Tariff Schedule (HTS) Chapters 01 through 99 was relatively flat as both imports and exports were valued at approximately U.S. \$371 billion. Agricultural, fishery, and forestry imports represented approximately 8 percent of all imports and 6 percents of all exports.

By Value Nearly Twice as Much Corn as Natural Gas Imported into Mexico: Beer and Combination Refrigerator/Freezers Exports Almost on Par

Among agricultural related commodities*, at the HTS 6 digit level, the most significant import by value was corn (HTS 100590) at almost U.S. \$3 billion and the most significant export by value was beer (HTS 220300) at U.S. \$2.1 billion. By value at HTS 6, corn was the 17th largest import and trailed behind numerous petroleum, electronic machinery, and auto-manufacturing products. By value at HTS 6, beer was the 27th largest Mexican export and trailed behind petroleum, gold, silver, and numerous manufactured goods and automobiles.

Interesting U.S. and Mexican Bilateral Trade Observations

- The two markets remain largely complementary with the United States exporting large values of bulk and intermediate or consumer-oriented goods that require additional processing to Mexico whereas Mexico exported large values of consumer-oriented and generally ready to consume products to the United States.
- According to INEGI data, year over year growth in Mexican agricultural, fishery, and forestry imports from the United States was 4.3 percent. Year over year growth in Mexican agricultural, fishery, and forestry exports to the United States was 1 percent.
- As several new 6 HTS codes were created in 2012, year over year growth by commodity is not easily compared, but generally promising growth in Mexican imports of U.S. products, even for larger value commodities, was seen in dried beans, apples, fresh/chilled chicken cuts, soybean meal, fructose, and hams. The greatest value decline was in imports of U.S. cotton.
- Likewise data changes confound comparison, but promising Mexican exports at 6 digit HTS codes from 2011 to 2012 include beef (boneless and bone-in), cucumbers, strawberries, tropical fruits (guavas, mangoes, and mangosteens), and peppers. The most significant value declines were in cane sugar and live beef cattle; largely due to domestic production/availability, as well as tomatoes due to prices and policy uncertainty.
- For imports from and exports to the United States, there was little overall change among the top commodities, but some ordinal changes occurred. E.g., beer exports to the U.S. overtook the leading export spot away from tomatoes and peppers moved from 6th to 3rd place leaping over cane sugar, beef cattle, and avocados. As for Mexican imports from the United States, there was little overall change among the top commodities exported to the United States. Generally, however, the changes can be explained with HTS code changes.
- The U.S. Bureau of the Census Trade Data reports U.S. agricultural, fishery, and forestry exports from the United States to Mexico were U.S. \$19.5 billion in 2012; a 3.3 percent gain over 2011. The Bureau reports United States imports from Mexico of agricultural, fishery, and forestry commodities was U.S. \$17.1 billion; a 3.6 percent gain over 2011.
- NOTE: It is very common to have data discrepancies as the timeliness of trade (e.g., product

leaves the United States in late December and remains in a bonded zone until January before being recorded by Mexico) or the respective Customs recorded values for the product could differ (e.g., Free On Board (FOB) recorded in the United States, but Mexico accounts it at Cost, Insurance, and Freight (CIF) prices when it enters the country).

*Ag. commodity data does not include Ethyl Alcohol and “spirits” under HTS 2208 or 220890. In HTS 2208, Mexico exported just over U.S. \$1 billion to the world and U.S. \$700 million to the United States in this category. In 220890, mostly Tequila, Mexico exported U.S. \$875 million to the World and U.S. \$634 million to the United States in 2012. As for imports in HTS 2208, Mexico imported U.S. \$346 million in 2012, the bulk of which were whiskies and brandies from the United Kingdom and other parts of Europe.
